Progressively builds a deep understanding of macromolecular behavior

Based on each of the authors' roughly forty years of biophysics research and teaching experience, this text instills readers with a deep understanding of the biophysics of macromolecules. It sets a solid foundation in the basics by beginning with core physical concepts such as thermodynamics, quantum chemical models, molecular structure and interactions, and water and the hydrophobic effect. Next, the book examines statistical mechanics, protein-ligand binding, and conformational stability. Finally, the authors address kinetics and equilibria, exploring underlying theory, protein folding, and stochastic models.

With its strong emphasis on molecular interactions, *Equilibria and Kinetics of Biological Macromolecules* offers new insights and perspectives on proteins and other macromolecules. The text features coverage of:

- Basic theory, applications, and new research findings
- Related topics in thermodynamics, quantum mechanics, statistical mechanics, and molecular simulations
- Principles and applications of molecular simulations in a dedicated chapter and interspersed throughout the text
- Macromolecular binding equilibria from the perspective of statistical mechanics
- Stochastic processes related to macromolecules

Suggested readings at the end of each chapter include original research papers, reviews and monographs, enabling readers to explore individual topics in greater depth. At the end of the text, ten appendices offer refreshers on mathematical treatments, including probability, computational methods, Poisson equations, and defining molecular boundaries.

With its classroom-tested pedagogical approach, *Equilibria and Kinetics of Biological Macromolecules* is recommended as a graduate-level textbook for biophysics courses and as a reference for researchers who want to strengthen their understanding of macromolecular behavior.

From reader reviews:

Phillip Chadwick:

Why don't make it to become your habit? Right now, try to ready your time to do the important work, like looking for your favorite book and reading a reserve. Beside you can solve your condition; you can add your knowledge by the reserve entitled Equilibria and Kinetics of Biological Macromolecules. Try to make book Equilibria and Kinetics of Biological Macromolecules as your pal. It means that it can to become your friend when you really feel alone and beside that of course make you smarter than before. Yeah, it is very fortunated for yourself. The book makes you far more confidence because you can know every thing by the book. So , we need to make new experience in addition to knowledge with this book.

Clyde King:

This book untitled Equilibria and Kinetics of Biological Macromolecules to be one of several books that will best seller in this year, that is because when you read this publication you can get a lot of benefit upon it. You will easily to buy this specific book in the book store or you can order it via online. The publisher of this book sells the e-book too. It makes you more readily to read this book, since you can read this book in your Smartphone. So there is no reason to your account to past this guide from your list.

Victor Dinh:

Reading a guide tends to be new life style on this era globalization. With examining you can get a lot of information that may give you benefit in your life. With book everyone in this world can certainly share their idea. Textbooks can also inspire a lot of people. Lots of author can inspire all their reader with their story or their experience. Not only the storyplot that share in the publications. But also they write about the knowledge about something that you need example. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors on this planet always try to improve their talent in writing, they also doing some investigation before they write with their book. One of them is this Equilibria and Kinetics of Biological Macromolecules.

Pat Thomas:

Would you one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Make an effort to pick one book that you just dont know the inside because don't assess book by its cover may doesn't work here is difficult job because you are scared that the inside maybe not as fantastic as in the outside search likes. Maybe you answer can be Equilibria and Kinetics of Biological Macromolecules why because the wonderful cover that make you consider with regards to the content will not disappooint an individual. The inside or content is actually fantastic as the outside as well as cover. Your reading sixth sense will directly guide you to pick up this book.
