MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications

A. R. Jha

MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications A. R. Jha

The integration of microelectromechanical systems (MEMS) and nanotechnology (NT) in sensors and devices significantly reduces their weight, size, power consumption, and production costs. These sensors and devices can then play greater roles in defense operations, wireless communication, the diagnosis and treatment of disease, and many more applications.

MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications presents the latest performance parameters and experimental data of state-of-the-art sensors and devices. It describes packaging details, materials and their properties, and fabrication requirements vital for design, development, and testing. Some of the cutting-edge materials covered include quantum dots, nanoparticles, photonic crystals, and carbon nanotubes (CNTs).

This comprehensive work encompasses various types of MEMS- and NT-based sensors and devices, such as micropumps, accelerometers, photonic bandgap devices, acoustic sensors, CNT-based transistors, photovoltaic cells, and smart sensors. It also discusses how these sensors and devices are used in a number of applications, including weapons' health, battlefield monitoring, cancer research, stealth technology, chemical detection, and drug delivery.

From reader reviews:

Phillip Herzog:

Information is provisions for anyone to get better life, information nowadays can get by anyone at everywhere. The information can be a know-how or any news even a huge concern. What people must be consider any time those information which is inside the former life are hard to be find than now is taking seriously which one is suitable to believe or which one the resource are convinced. If you find the unstable resource then you buy it as your main information you will have huge disadvantage for you. All of those possibilities will not happen inside you if you take MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications as your daily resource information.

Sharon Grace:

Hey guys, do you would like to finds a new book to read? May be the book with the name MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications suitable to you? The book was written by well known writer in this era. Typically the book untitled MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications is the main of several books that will everyone read now. This kind of book was inspired a lot of people in the world. When you read this e-book you will enter the new dimensions that you ever know before. The author explained their concept in the simple way, thus all of people can easily to comprehend the core of this publication. This book will give you a lot of information about this world now. In order to see the represented of the world in this book.

Manuel Rose:

This MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications is great guide for you because the content which can be full of information for you who else always deal with world and also have to make decision every minute. This book reveal it details accurately using great coordinate word or we can state no rambling sentences included. So if you are read the idea hurriedly you can have whole facts in it. Doesn't mean it only will give you straight forward sentences but difficult core information with lovely delivering sentences. Having MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications in your hand like finding the world in your arm, info in it is not ridiculous one. We can say that no book that offer you world in ten or fifteen minute right but this e-book already do that. So , it is good reading book. Heya Mr. and Mrs. hectic do you still doubt in which?

Wilma Hogan:

That publication can make you to feel relax. That book MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications was colourful and of course has pictures on the website. As we know that book MEMS and Nanotechnology-Based Sensors and Devices for

Communications, Medical and Aerospace Applications has many kinds or type. Start from kids until teenagers. For example Naruto or Private eye Conan you can read and believe you are the character on there. So , not at all of book tend to be make you bored, any it offers up you feel happy, fun and chill out. Try to choose the best book for you and try to like reading this.
