This book shares the visionary insights and practical experiences of several industry experts who present the multifaceted aspects of road engineering.

Covers the history of road construction programmes through to ongoing projects in Eastern Europe and Asia

Includes updated material on remote sensing and appropriate computer techniques currently used in road location

Focuses on European dimension and subsurface exploration techniques

Aimed at final year and master s degree civil engineering students, this edition will propose topic areas that will be a useful introductory reference, acting also as a reference guide for engineering offices and technical libraries.
