## The Biology and Conservation of Wild Canids

No group of wild mammals so universally captures the emotions of people world-wide than do wild canids. That emotion can be enchantment and fascination, but it can also be loathing, because the opportunism that is the hallmark of the dog family also leads them into conflict with humans. In the developed world at least, the fascination with wild canids doubtless stems from people's captivation with domestic dogs - everybody feels they are an expert on canids! While most people may be familiar with only the better known members of the dog family, such as the grey wolf and the red fox, there are in fact 36 species of wolves, dogs, jackals and foxes. They attract hugely disproportionate interest from academics, conservationists, veterinarians, wildlife managers and the general public.

This book brings together in single volume an astonishing synthesis of research done in the last twenty years and is the first truly compendious synthesis on wild canids. Beginning with a complete account of all 36 canid species, there follow six review chapters that emphasise topics most relevant to canid conservation science, including evolution and systematics, behavioural ecology, population genetics, diseases, conflict/control of troublesome species, and conservation tools. Fifteen detailed case studies then delve deeply into the very best species investigations currently available written by all the leading figures in the field. Much of the material is previously unpublished and will make fascinating reading far beyond the confines of canid specialists. These chapters portray the unique attributes of wild canids, their fascinating (and conflictive) relationship with man, and suggestions for future research and conservation measures for the Canidae. While most canid species are widespread and thrive in human dominated landscapes, several are in severe jeopardy; habitat loss, illegal hunting, persecution by farmers and disease all imperil dwindling populations. A final chapter analyses the requirements of, and approaches to, practical conservation, with lessons that go far beyond the dog family. It concentrates particular attention on priorities for the protection of the most threatened canid species, including the red wolf, African wild dog, Ethiopian wolf, Island fox and Darwin's fox.

The wild canids provide examples that will thrill the evolutionary biologists and theoretician, enthrall the natural historian and challenge the conservationist and wildlife manager. Anybody interested in evolutionary and behavioural biology, in mammals, in the environment, or in conservation will find much that is new and enriching in this book.

### From reader reviews:

#### **Agnes Henson:**

What do you regarding book? It is not important to you? Or just adding material when you need something to explain what you problem? How about your time? Or are you busy individual? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? Every person has many questions above. They need to answer that question mainly because just their can do that. It said that about reserve. Book is familiar in each person. Yes, it is correct. Because start from on kindergarten until university need this particular The Biology and Conservation of Wild Canids to read.

#### **Kathleen Knight:**

Do you considered one of people who can't read pleasant if the sentence chained in the straightway, hold on guys this specific aren't like that. This The Biology and Conservation of Wild Canids book is readable by means of you who hate those perfect word style. You will find the data here are arrange for enjoyable examining experience without leaving also decrease the knowledge that want to deliver to you. The writer of The Biology and Conservation of Wild Canids content conveys thinking easily to understand by a lot of people. The printed and e-book are not different in the articles but it just different by means of it. So , do you nonetheless thinking The Biology and Conservation of Wild Canids is not loveable to be your top list reading book?

#### **Melinda Walton:**

Reading a book can be one of a lot of task that everyone in the world loves. Do you like reading book therefore. There are a lot of reasons why people fantastic. First reading a e-book will give you a lot of new information. When you read a publication you will get new information mainly because book is one of several ways to share the information or their idea. Second, looking at a book will make an individual more imaginative. When you studying a book especially fiction book the author will bring someone to imagine the story how the character types do it anything. Third, you can share your knowledge to some others. When you read this The Biology and Conservation of Wild Canids, you may tells your family, friends along with soon about yours publication. Your knowledge can inspire average, make them reading a e-book.

#### **Justin Tapscott:**

You are able to spend your free time to see this book this book. This The Biology and Conservation of Wild Canids is simple bringing you can read it in the playground, in the beach, train in addition to soon. If you did not have got much space to bring the printed book, you can buy typically the e-book. It is make you much easier to read it. You can save the particular book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.
