## **Differential and Riemannian Manifolds (Graduate Texts in Mathematics)** Serge Lang

This is the third version of a book on differential manifolds. The first version appeared in 1962, and was written at the very beginning of a period of great expansion of the subject. At the time, I found no satisfactory book for the foundations of the subject, for multiple reasons. I expanded the book in 1971, and I expand it still further today. Specifically, I have added three chapters on Riemannian and pseudo Riemannian geometry, that is, covariant derivatives, curvature, and some applications up to the Hopf-Rinow and Hadamard-Cartan theorems, as well as some calculus of variations and applications to volume forms. I have rewritten the sections on sprays, and I have given more examples of the use of Stokes' theorem. I have also given many more references to the literature, all of this to broaden the perspective of the book, which I hope can be used among things for a general course leading into many directions. The present book still meets the old needs, but fulfills new ones. At the most basic level, the book gives an introduction to the basic concepts which are used in differential topology, differential geometry, and differential equations. In differential topology, one studies for instance homotopy classes of maps and the possibility of finding suitable differentiable maps in them (immersions, embeddings, isomorphisms, etc.).

### **From reader reviews:**

#### **Elaine Moore:**

Have you spare time for just a day? What do you do when you have far more or little spare time? Yep, you can choose the suitable activity to get spend your time. Any person spent their spare time to take a wander, shopping, or went to typically the Mall. How about open or even read a book eligible Differential and Riemannian Manifolds (Graduate Texts in Mathematics)? Maybe it is to become best activity for you. You recognize beside you can spend your time along with your favorite's book, you can better than before. Do you agree with its opinion or you have different opinion?

#### **Shirley Davenport:**

Do you really one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Attempt to pick one book that you never know the inside because don't assess book by its deal with may doesn't work the following is difficult job because you are afraid that the inside maybe not because fantastic as in the outside seem likes. Maybe you answer could be Differential and Riemannian Manifolds (Graduate Texts in Mathematics) why because the great cover that make you consider in regards to the content will not disappoint a person. The inside or content will be fantastic as the outside or cover. Your reading sixth sense will directly make suggestions to pick up this book.

#### **Leigh Harris:**

This Differential and Riemannian Manifolds (Graduate Texts in Mathematics) is fresh way for you who has attention to look for some information as it relief your hunger of knowledge. Getting deeper you upon it getting knowledge more you know or you who still having bit of digest in reading this Differential and Riemannian Manifolds (Graduate Texts in Mathematics) can be the light food to suit your needs because the information inside that book is easy to get by anyone. These books build itself in the form that is reachable by anyone, yeah I mean in the e-book form. People who think that in e-book form make them feel sleepy even dizzy this e-book is the answer. So there is no in reading a guide especially this one. You can find actually looking for. It should be here for you actually. So , don't miss the item! Just read this e-book type for your better life and also knowledge.

#### **Christina Bishop:**

What is your hobby? Have you heard this question when you got scholars? We believe that that question was given by teacher to their students. Many kinds of hobby, Everyone has different hobby. Therefore you know that little person including reading or as reading through become their hobby. You have to know that reading is very important along with book as to be the point. Book is important thing to increase you knowledge, except your own teacher or lecturer. You get good news or update concerning something by book. A substantial number of sorts of books that can you choose to use be your object. One of them is niagra Differential and Riemannian Manifolds (Graduate Texts in Mathematics).
