Fundamentals of Space Medicine: 23 (Space Technology Library) Gilles Clément

Investigations in space have led to fundamental discoveries of the human body to the space environment. Gilles Clément has conducted extensive research in this field. This readable text presents the findings from the life science experiments conducted during and after space missions. About 1200 human space flights have been completed to date, including more than 500 astronauts from various countries, for a combined total presence in space of about 90 years. The first edition of this title was published in 2005 (written in 2003 – 2004), and new data is now available from crewmembers participating in long-duration flights on board the International Space Station (ISS). The number of astronauts who have spent six months in orbit has doubled since 2004. On board the ISS, the astronauts use newly developed pharmaceutical countermeasure for bone loss (such as biophosphonates) and state-of-the-art exercise resistive devices against muscle atrophy and cardiovascular deterioration. The ISS life support systems now use advanced closed-loop systems for meeting the needs of a 6-person crew, including recycling urine to water. Some of these new technologies have potential spin-offs for medical (i.e., sedentary life style, obesity) and environmental issues here on Earth. And finally, there are new space research opportunities with the Orion space vehicle that will soon replace the Space Shuttle, the Moon, and Mars space exploration program that is slowly but surely taking shape, and the space tourism sector that has become a reality. The focus on this edition is the ISS, Orion and planetary exploration, and space tourism. This edition also includes more than 20% new material, along with photographs, data, and video clips for Springer Extras!

From reader reviews:

Peter Hudson:

The guide with title Fundamentals of Space Medicine: 23 (Space Technology Library) includes a lot of information that you can find out it. You can get a lot of advantage after read this book. This particular book exist new expertise the information that exist in this guide represented the condition of the world now. That is important to yo7u to learn how the improvement of the world. This book will bring you in new era of the syndication. You can read the e-book in your smart phone, so you can read the item anywhere you want.

Lisa Marsh:

Do you really one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Try to pick one book that you find out the inside because don't determine book by its include may doesn't work here is difficult job because you are scared that the inside maybe not while fantastic as in the outside look likes. Maybe you answer may be Fundamentals of Space Medicine: 23 (Space Technology Library) why because the excellent cover that make you consider regarding the content will not disappoint anyone. The inside or content is actually fantastic as the outside or cover. Your reading 6th sense will directly show you to pick up this book.

Martin Duval:

You can get this Fundamentals of Space Medicine: 23 (Space Technology Library) by look at the bookstore or Mall. Simply viewing or reviewing it may be your solve problem if you get difficulties for ones knowledge. Kinds of this book are various. Not only through written or printed but in addition can you enjoy this book through e-book. In the modern era like now, you just looking by your local mobile phone and searching what your problem. Right now, choose your ways to get more information about your publication. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose suitable ways for you.

Gilbert Westmoreland:

As a college student exactly feel bored to help reading. If their teacher inquired them to go to the library or to make summary for some e-book, they are complained. Just small students that has reading's spirit or real their interest. They just do what the instructor want, like asked to go to the library. They go to generally there but nothing reading critically. Any students feel that reading through is not important, boring as well as can't see colorful photographs on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this age, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this Fundamentals of Space Medicine: 23 (Space Technology Library) can make you feel more interested to read.
